Installation Instructions:

1. Verify the Turnstiles Model (TABLE 1) and snap a chalk line on the floor in the desired location(s) of the Post(s) to determine the proper centerlines of the Post(s). A tile line may be substituted for the chalk line. Allow a minimum distance of 22.5" (MT/GST) from the center of the Turnstile Post to the center of the Yoke Post. Be aware that if anymore than 3" is left between the Yoke Post and the Turnstile Arm, unwanted passage may be obtained.

Ensure that all OV Rails OV Posts are straight and level. All bolts should be tightened to 20-ft/lbs. torque using a 9/16" socket. Secure OV Rails with the 1/4-20 x 1/4" set screw found in the base package.
3. Install the Turnstile Head onto the Turnstile Post by pressing it down over the Clutch Assembly while rotating it in the direction the turnstile will turn (to the left if counter-clockwise, or to the right if clockwise).
